🎓 Education

MSc Financial Technology (Distinction)

09/2022 – 09/2023

University of Nottingham

Algo-Trading with Python | Data Analytics | Blockchain and Cryptocurrency
Financial Markets and Trading | Advanced Statistical Modelling using Stata

B.Tech Computer Science Engineering

08/2016 – 08/2020

Rajagiri School of Engineering and Technology

SQL and Database Management | Object Oriented Programming | C++ and Java
Natural Language Processing | Machine Learning | Computer Vision

💼 Work Experience

Application Developer

Present

University of Nottingham

Nottingham, UK

- Developed and maintained scalable web applications using Django framework and .NET Core, implementing RESTful APIs and microservices architecture to support 50,000+ users
- Designed and implemented CI/CD pipelines using Azure DevOps, automating build, test, and deployment processes with YAML pipelines
- Collaborated with cross-functional teams using Agile methodologies and DevOps practices, participating in sprint planning, code reviews, and continuous integration workflows
- Managed version control using Git workflows, implementing branching strategies and pull request processes to maintain code quality and team collaboration

Financial Analyst Intern

06/2023 – 07/2023

Cricket Archive

London, UK

- Reviewed financial models and pricing structures for company's software products
- Provided recommendations to optimize monetization strategy and expansion plan
- Developed marketing strategies and sales projections for new product launches targeted at emerging markets

Business Valuation Analyst

04/2022 – 09/2022

Eunoia

Doha, Qatar

- Performed financial modeling and valuation analysis for potential investment opportunities
- Built DCF, comparable trades, and precedent transaction models to determine valuation ranges and identify risks/upside
- Synthesized company financials, market data, and management projections to forecast future performance and cash flows

Software Developer

12/2020 – 12/2021

Redlogik

Doha, Qatar

- Developed and maintained Python-based API solutions using Django framework as part of an agile team
- Implemented RESTful APIs consumed by front-end React applications for logistics web platform
- Collaborated with cross-functional and agile teams to understand requirements using Jira and document technical specs in Confluence

Machine Learning Intern

09/2019 – 10/2019

Qatar Computing Research Institute

Doha, Qatar

- Tested and evaluated various neural network and mutation algorithms for genetic imputation
- Achieved highest accuracy of 76% using a variational autoencoder neural network model

Activities and Projects

Hackathon Finalist

Lead a team of 5 to achieve a top 20 ranking out of 800,000 participants in an all India Hackathon hosted by UST Global, demonstrating strong technical skills

Company Based Challenge Winner

Developed optimal pricing strategy for UK firm Cricket Archive by analyzing customer segments and conducting competitive analysis

Decentralized Insurance Platform

Built Ethereum based DApp architecture enabling peer-to-peer insurance policies that uses smart contracts programmed in solidity for claims settlements

Financial Forecasting

Modeling Machine Learning Algorithms such as Random Forests, SVMs and Gradient Boosting for stock market predictions. Tuned hyperparameters and engineered new features to optimize model accuracy. Used pandas and matplotlib to visualize predictions and actual price movements

Performance Analysis of Trading Strategies

Backtested trading strategy models such as CAPM using Python; analyzed risk-return metrics to identify optimal equity trading

Built Blockchain Architecture for the Airline Industry

Designed blockchain reference architecture for airlines to track and monitor status of customer luggage using a Hyperledger

Pose Transfer

Created a tool that transfers the pose from a source subject to a target subject using TensorFlow 2.0 and image processing using GANs on python

Climate Change Blockchain Application

Developed blockchain prototype application on Ethereum for carbon credit trading between corporate and individual entities with customer driven incentives

E-Commerce Website

Implemented a full-stack e-commerce website with Python, Django, JavaScript, PHP and MySQL

Song Recognition System

Developed audio fingerprinting system to identify songs using SHA-1 hashing and Python libraries. Extracted spectrogram data from audio files to create unique fingerprints for lookup with an accuracy of 92%

Skills

Python

Sklearn, numpy, pandas, BS4, TensorFlow, Django

Machine Learning Algorithms

Neural Networks, Gradient Boosting, Random Forests, Genetic Algorithms

SQL

Advanced SQL with Python, PHP and cloud integration

Stata

Cleaning, manipulating, visualizing, regression and hypothesis testing

Leadership Experience

Event Management

- Hosted local Tedx and Model United Nations (MUN) chapters during undergraduate studies

Volunteering

- Food bank volunteering with Himmah organization
- Flood relief volunteer during Kerala floods of 2018

Public Speaking and Representation

- Attended MUN conference in New York and served as youth ambassador
- Represented university finance society at events and conferences

Certificates

ITIL 4 Foundation

- Gained comprehensive understanding of IT service management and the service value system
- Learned key concepts of service strategy, design, transition, and operation for effective IT service delivery

Six Sigma Yellow Belt

- Applied DMAIC methodology to identify process improvements and reduce defects in business operations
- Utilized statistical tools and data analysis techniques to support process optimization initiatives
